

HP WOLF PRO SECURITY EDITION

DATASHEET

HP WOLF SECURITY

Virtualization and Deep Learning AI Security for SMB Environments

Enterprise-level protection against malware in a simple, preconfigured installation package designed for small and medium-sized businesses. No management required.

Improve small-office security

Support your small to medium-sized business with powerful security from HP. HP Wolf Pro Security Edition¹ is comprised of three layers of security protection.

HP Wolf Pro Security Edition provides threat containment, malware prevention, and identity protection in a single, easy to use configuration. Triple-protection is achieved by the combination of hypervisor-based threat containment, next generation AI malware protection, and anti-phishing in a single package. The offering is pre-configured and optimized for SMBs or offices without dedicated IT-management.

HP Wolf Pro Security Edition begins protecting your PC immediately after user registration. IT support is not required, but if your office grows, basic manageability tools are supported³.

HP recommends Windows 10 Pro for Business.

HP support is included with HP Wolf Pro Security Edition to help get the most from your new, powerful security software.

Simplify protection with a smart design

A simple desktop console presents settings, features, and security threat-reporting. This allows you to view how HP Wolf Pro Security Edition is protecting you by identifying the filetypes and websites with wrongful intentions toward your PC.

Security is activated after you power-on your PC for the first time and register the product. HP Wolf Pro Security Edition manages background updates, quarantines malicious files and protects your browsing experience.

THREAT CONTAINMENT

MALWARE PREVENTION

HP WOLF PRO SECURITY EDITION

HP WOLF PRO SECURITY EDITION

Enterprise Security made for the SMB

HP Wolf Pro Security Edition protects your PC with browser-based threat containment, AI-based malware scanning, anti-phishing credential protection.

HP Wolf Pro Security Edition does not require contacting HP to update security protection. The triple-threat-protection is connected to the HP cloud service, which provides updates and new security profiles behind the scenes, while you continue working.

Security settings are preconfigured out of the box and protection begins the first time you use-and-register your new PC.

An intuitive dashboard provides a list of threats or items potentially attacking your PC – and how threats were halted. The dashboard provides a filename, date and how the file was safely handled on your PC – while reporting to the HP cloud to prevent recurring attacks.

By interlacing virtualization and isolation HP Wolf Pro Security Edition quarantines files, then allows you to view those files in a virtual safe zone – allowing you to determine if a file is safe or needs to be deleted from the PC.

- **Threat Containment** – Features an advanced version of HP Sure Click, hypervisor based, virtualization software, protecting against malicious websites and file downloads.
- **Malware Prevention** – Features an advanced version of HP Sure Sense, deep-learning AI – anti malware technology
- **Identity Protection** – HP Wolf Pro Security Edition features an anti-phishing engine with the ability to scan and warn users about websites that may be logging or capturing user credentials, login and password data.

Simplify protection with a smart design

Security is activated after you power-on your PC for the first time and register the product. HP Wolf Pro Security Edition manages background updates, quarantines malicious files and protects your browsing experience.

HP WOLF PRO SECURITY EDITION DASHBOARD

HP Wolf Pro Security Edition provides a single dashboard, with a simple 'tabbed view' layout. Each tab presents a variety of parameters for security features, settings and threat reports.

Dashboard features include but are not limited to:

STATUS TAB

Presents an intuitive info center for HP Wolf Pro Security Edition

- Current protection status
- Number and date of scanned files on your PC
- Number of websites visited and protected

ALERTS TAB

Provides an active list of detected malicious files, websites and credential phishing dialog boxes

- A viewable list of harmful files placed on your PC via USB Key, browser, email attachment or download. (Potentially malicious files present the name, date, file type and user option to view or delete the file)
- Correct and act on a file, using HP threat isolation technology to determine if the file is safe or not

SUPPORT TAB

About Information – Version number

- HP Wolf Pro Security Edition will automatically update to the latest version when connected to an active internet connection

Advanced Settings

- Enable and disable security (HP recommends to always leave security software on-and-active)
- Logging - ability to capture, send and clear activity-log files if support is required
- Live Containment View – real-time view of isolated websites opened by your browser
